

Important Notes and FAQ's

First of all, Thank You for choosing J. Edwards Associates, LLC, CT Lands Surveyor, for all of your surveying needs.

We feel it is of the utmost importance to provide our clients with a contract as this gives us the opportunity to better explain to you the methods and procedures required to perform a property survey. It also protects you from receiving a service that may not be what you thought you were getting. As you know we asked you several questions about your property and based on your answers we may have advised you to have us perform a service you did not know you needed. Much of our contract is informative explanations of our services. We included our in

f
or
m
ation within t
h
e contract rather than on an enclo
s
ed sheet to sh
o
w
you we will do what we
say and are co
n
t
ractually bound to our stan
d
ards.

The purchase of Real Estate is most likely the largest monetary investment most people will ever make in their lifetime. Surveyors are here to help you know where your property is located.

Most people will purchase property without having it surveyed. Since you are reading this you have made the decision or are thinking about having a boundary survey performed on;

your property or property you are about to purchase.

The importance of a survey is not realized many times until your neighbor tells you part of what you thought you purchased just might be theirs and not yours. Or the land you purchased actually contains more land than you thought.

You may be asking yourself this question;

Do I want to invest \$XXX,XXX.XX (enter your purchase price) in this property and trust the Real Estate agent to show me where it is? Real Estate agents are a great asset when finding your dream home and we work with many of them surveying property they are selling for their clients. If in the rare instance you might find a Real Estate agent that atte

pts to tell you that you don't n
e
ed a survey and what they showed you is what you are buying, si
m
ply ask for their
s
tate
m
ent in writing.

The vast majority of Real Estate agents will be the first to tell you they can only show you what
was showed to them
and that they are not surveyors. J
u
st as you
w
ouldn't come to us when you are looking for a ho
m
e to buy or sell on the Real Estate
m
arke
t
, you shouldn't rely on them
when you have found the ho
m
e of your drea
m
s and want to know about the properties
location.

We have witnessed many horror stories over the years and when found we will work with you a
n
d your neighbor to solve any discrepancies.
We are not trying to scare anybody into getting a survey and most properties do not have any

proble

m

s with them

what so

ever other than the acreages are usually different than the deed states. But the only way to find

m

o

st of t

h

em

is to have it surveyed. Think of a survey as a way to help 'secure' your invest

m

ent.

The following are some common questions asked by people about surveys.

How long will it take to finish my survey?

From the start date to finish date can vary greatly. We try to have each job finished within a week to two weeks from

the start date of the f

i

eld work. How

e

ver this depends on

m

any factors such as acreage. If you order a lot survey it is possible to have it finished

with a week or less of the start date. A survey of 10-50

Acres it is possible to have your finished product within a few weeks of the start date. But as the acreage gets larger the longer it

will take to have your survey completed.

Also if your property

has any other properties that abut it, this will add to the time

it takes to complete your survey

because here at L. Edwards Associates we research every property

that touches your

property at a minimum.

We also

may need

to research other nearby properties depending on the evidence we find both in the courthouse and the field.

We WILL NOT compromise quality of service for speed of service.

I am having a boundary dispute. I am afraid if I tell you about it my survey will cost more. Why should I tell you about disputes

**w
h
en all I
w
ant is my lines surveyed and not my neighbors?**

Just because you are having a dispute with your neighbor that does not mean your survey will cost more. It is best to be open about any problem you are having with your neighbor. Your boundary line is also your neighbor's boundary line. If you don't tell us about your dispute, what usually happens is, we end up making special trips to your property or additional trips to the courthouse. When we are not informed of disputes upfront it will cost you more. Once we discover it on our own. If you don't tell us about your dispute your neighbor most likely will and when they tell us they are usually very upset. It is very important we know from the start.

My deed says I have 80 Acres. After you surveyed my property it said I only have 76.34 Acres. Where did the rest of my property go?

Most surveys will not have the identical acres as is shown on your deed especially if you have purchased property that has not been surveyed for a very long time.

For example, it is

not that the old survey was done incorrectly it has

more to do with the history of the original

surveyors calculations. Many of the older deed descriptions are from surveys that were performed

100 years

ago (or more) ago and that's way back

before any type of calculators were available. The original surveyors had to do their computations by hand. For the acreage to be calculated

all it takes is a simple

multiplication of one number and when surveys are calculated a surveyor

is

able to calculate the acreage.

m
ust process thousands of numbers. Another
f
actor is the pr
e
ci
s
i
o
n the s
u
rvey was perfor
m
ed to. Today we locate to the nearest few seconds of angle and the nea
r
est hundredth of a foot. B
a
ck before Total Stations with electr
o

ces and GPS the old survey
o
rs used a transit or a c
o
mpass and had to
m
easure distances up a
n
d down the hills with a chain or
s
te
e
l tape. The
o
lder s
u
rveys were,
m
any t

measured to the nearest pole (also called rod or perch=16.5 feet) or to fractional parts thereof. So in today's standards the old surveyors' numbers usually don't

match up with our numbers. But don't

think the old surveyors were any less accurate as to where your property corners should be. That would not be an accurate assumption

and you would be precisely wrong. The present day surveyors job is to retrace the past surveyors footsteps and restore the corners they set. Though their numbers weren't

calculated to our current precision their accuracy was just as good,

when performed to the standards of their time, as we currently perform

to the standards of our time

e. Many of the descriptions in current deeds

may very well have been the original survey of the property. So don't

wor

ry

about the

acreage difference it doesn't

mean you don't

have the land your deed says you are supposed to have. You never know, if you buy another

parcel of land once your survey is complete your property could have

more

acres than the deed says.

My deed said my boundary line was a North 73 degrees East for 26 poles. After you did our survey your map showed

the same line as a

North 79 degrees 23 minutes East for 423.86 feet. Why are they different?

Most of the difference in angle is because of the magnetic declination. The magnetic declination changes over time

e. Other things that affect the difference are how the previous surveyor established the boundary line. Many older surveys were performed

with a compass. Local iron deposits

are common near the line. In the past,

surveyors may pull a compass.

With today's equipment, once we establish a new

magnetic bearing, our equipment carries our reading throughout the survey

so local disturbances won't

affect our bearings. If you look on your plat we show the standard

magnetic declination reading on the North arrow. Most of the difference in distance has to do with how closely the previous surveyor

measured the distance. Older surveys were performed

with a chain or steel tape and, depending on the terrain,

they may have been measured by having to

measure

measure very short distances at a time.
e. All of these distances were written in a field book and were added together and calculated by hand. So it is possible a distance was measured as measured or it could be the figure the previous surveyor calculated was rounded to the nearest pole. Each pole is 16.5 feet. If the older survey only recorded to the nearest pole then the actual distance on the ground line could vary by several feet either direction. In other instances a distance could have been measured as calculated and there could be 10 or more feet different. This however doesn't mean the corners set by the original surveyor are in the wrong location. Another reason could be that your deed had a typo in it and through in-depth courthouse research performed by J. Edwards Associates we found the correct distance and/or angle during our research of your property. This is another common reason for so

e
of the larger distance
a
nd/or
angle
differences you
m
ay see when co
m
p
aring your deed to our finished survey.

Do you ever make mistakes? (I added this I know you want to ask)

In short the answer is, YES. Even with our fancy equipment and thoroughness of our research we too are human. J. Edwards
Associates strives to find any and all
mistakes
issues from
planning
a
tting errors to description errors before we send our paperwork to you but they happen so

**I think the corner you set has been moved by somebody. Can you tell if it has been
moved?**

Yes we can. In the instance you think somebody has disturbed your boundary monument we will return to your property and check its location. We set 30 inch long 5/8" rebar. They are difficult to pull and replace but if a person is set on doing so

monument
something they will usually
figure out a way to do it. Don't

think we have to spend hours and hours at your property to determine whether or not the monument has been moved. In some cases it may be necessary but in most cases we can evaluate it quickly.

When J. Edwards & Associates, LLC CT Land Surveyor sets our monuments we insure them

pl
e

m
ent where it
b
elongs.

This could take several hours to do depending on location, nearby undisturbed monuments and terrain. We charge an hourly rate for this service.

My neighbor hired a surveyor. Does that mean he can take part of my property?

In short, the answer is NO. If a surveyor is surveying for your neighbor that does not mean the surveyor will take y

o
ur prope
r
ty. It does n
o
t
m
atter which party
h
ires
the survey
o
r. Surveyors
are ne
u
tr
a
l and held to high ethical standards when it comes to boundary d
e
ter
m
ination. As a general rule,
S
urveyors can't be

'bought'. The reason is even if a Surveyor accepts money to move a property line the next
surve yor will
find what the first surveyor did and
the first surveyor will be turned in to the
W
est Virginia Board of Professional
Surveyors,
his
license
m
a
y be taken, and if so, they will no longer be allowed to survey. No a
m
ount of money is worth the loss
of your livelihood. So rest assured,
no
m
atter who your neighbor hired to survey, you can always have another surveyor check their
work.

When should I get a survey?

In our opinion, any time you are buying or selling property.

When you place your property on the market, it would be advantageous to you to have it surve
ye
d
. The cost of a survey is outweighed by the proble
m
s that
m
i

ght occur if you don't get it surveyed. Someti
m
es the potential buyer will only purchase the property if it has a new survey. If you are trying to
sell a large tract of land this will hold up the clo
s
ing as it can take several weeks for a surveyor to be able to start the survey and
s
ever
a
l
m
ore weeks for the surveyor to
finalize and produce the do
c
u
m
ents for the survey. Many len
d
i
n
g institutio
n
s will only
g
i
ve loa
n
s on property that has a rece
n
t sur
v
ey. If you intend to sell your property 'by the acre' you can run into other proble
m
s as
m
ost of t
h
e ti
m
e, especially with larger tra
c
ts, t
h
e a
c
tual

a
crea
g
e will be
d
i
ff
erent than what
the
d
eed
s
tat
e
s by sev
e
ral
a
cres. If
the prope
r
ty is selling for \$1,500.00 or more per acre then a few acres
can make a big difference in the purchase price, so
m
et
i
m
es to the advantage of the buyer and so
m
et
i
me
s to the advantage of the seller. Many properties change hands and are sold 'in gro
s
s and not by acre'. This
m
eans if
you are looking at 100Acres for 'X' a
m
ount of dollars, then you pay no
m
atter what the acreage is. If the 100 Acres is actually 80 Acres you still have to pay the sa
m
e a
m
ount. So by not getting

a survey
prior to cl
os
ing then you
will have
n
o recour
s
e if the survey reveals fewer acres than
w
hat the
d
eed states.

Not as often the acreage could be more than what the deed states. In this case it would work to the buyers' advantage to not have a survey. If you are the sell
e
r though, it
m
eans you
c
ould have potentially sold your property for more
m
oney.

If you are buying it is worth the price of a survey, in our opinion, to know what you are buying. Once you have signed the deed it is yours. So any problems with the pr
o
perty lines
n
ow belong to you. Ultimately it's up to you to decide wheth
e
r to have a survey or not.

We at J. Edwards Associates hope the information we provided to you is helpful. No matter which surveyor y

o
u ulti
m
ately choose to provide you with sur
v
eyi
n
g services,
p
l
ease know that we appreciate your inquiry and thank you for allowing us to answer so
m
e questions you
m
ay have h
a
d or so
m
e you
m
ay have never thought to a
s
k the surve
y
or. If you have any questions drop us
a line and we will do o
u
r very best to answer the
m
.
